

Universal Seed Sensor

Innovative, Accurate and Versatile

DICKEY-john introduces a new Universal Seed Sensor

The new DICKEY-john Universal Seed Sensor now allows the Hi-rate seed counting performance to be offered on almost any precision planter, whether operating on flat terrain or on hillsides. This innovative electronics package is designed for installation on a mounting bracket under the seed drop. Depending on the sensor installation location, the sensor will either detect and monitor seed flow if it is appropriate, seeds be accurately counted. Choose from the various DICKEY-john consoles to either monitor seed flow (PM 100 or PM 200 series) or seed population (PM 300 series) and reach to the DICKEY-john unmatched planting precision and versatility.
