

DICKY-john Products

DICKY-john offers innovative and reliable products mainly suited for agricultural and off-road applications. The product portfolio ranges from monitoring systems for agricultural machinery (e.g. seed flow monitoring) to high quality analytical instruments (e.g. for grain moisture or temperature). In addition to these application focused products, we are offering sensor products (e.g. speed sensors) that can be used in a variety of different applications. Please choose your product area of interest below.

Control Systems and Sensors for Agricultural Machinery

Control and monitoring systems for agricultural machinery
Sensors that can be used as stand alone products or with our control systems

- Application control and monitoring systems for chemical and fertilizer spreading and spraying
- Planter monitors and blockage detection systems
- ISOBUS Solutions
- GPS-based guidance systems

- Radar signal and GPS-based ground speed sensors
- Various Sensors like seed flow sensors, application rate and hopper level sensors

Analytical Products

Grain Analyzing Computers and NIR Analyzers
Hand-held instruments for a variety of applications

- NIR Grain Analyzers
- Grain Moisture and Analyzing Computers

- Hand-held Grain Moisture Analyzers

- Soil Compaction Testers
- Hay Moisture Testers
